Portfolio: andrii-mitko-brand.vercel.app

Location: Bila Tserkva, Ukraine

SUMMARY

Junior Full-Stack Developer with hands-on experience building responsive web applications using JavaScript, TypeScript, React, Next.js, and Node.js. Experienced in full-stack feature ownership within large team monorepos — from frontend forms and state management to Express/MongoDB backend endpoints and API contracts. Skilled in Git workflows, cross-stack debugging, and Agile team development. Strong technical background in automation systems, contributing to analytical thinking and complex problem-solving.

HARD SKILLS

HTML5, CSS3, Flexbox, Grid, Responsive Design, JavaScript (ES6+), TypeScript, React, React Components, Hooks, Zustand, Formik, Yup, Next.js (App Router), State Management, Node.js, Express.js, MongoDB, Mongoose, JWT Authentication, REST API, Zod, Git, GitHub, Version Control, Branching Strategy, Vite, Figma, Agile, Scrum.

LANGUAGES

English: elementary Ukrainian: upper-intermediate Russian: advanced

PROJECT EXPERIENCE

WONA Bride — Wedding Dress Salon Website (Commercial / Solo Project)

Live Demo: <https://wona-bride.com.ua/>

GitHub Code: https://github.com/Andrii-Mitko/wona_bride

Technologies: Next.js, React, TypeScript, MongoDB, Mongoose, Zustand, React Query, Formik, Yup, Zod, Cloudinary, Nodemailer, Vitest.

Description: Commercial full-stack e-commerce website built for a real bridal and evening-dress salon — live in production and actively used by the business.

Functionality: Dress catalog with filtering/pagination, cart and wishlist, order form with email/Telegram notifications, and an admin script for managing inventory.

Role: Solo Full-Stack Developer. Built the entire application end-to-end: Next.js/TypeScript frontend, backend API and MongoDB models, Cloudinary image handling, form validation (Formik/Yup/Zod), Zustand/React Query state, and Vitest tests. Deployed to production for a real client.

Harmoniq — Webcrafters Project 03 (Team Project)

GitHub Code: <https://github.com/vitaliypolets/project-webcrafters-03>

Technologies: TypeScript, React, Next.js (App Router), Node.js, Express, MongoDB, Mongoose, Zustand, Formik, Yup, Zod, JWT, Git.

Description: Full-stack social publishing platform built by a 13-person team in a single monorepo (Next.js frontend + Express backend), using a shared ownership model and canonical API contract.

Functionality: Authentication with JWT and automatic session restore, protected/guest-only routes, article catalog with filtering and pagination, user profiles and bookmarks.

Role: Feature Owner — Login, Auth State & Route Guards. Built the login form and Express endpoint end-to-end, the Zustand auth store, and route guards for protected/guest-only pages. Diagnosed and fixed several cross-stack bugs (env misconfiguration, unhandled MongoDB connection errors, an _id/id API-contract mismatch) and refactored backend error handling to a centralized middleware. Collaborated across a 13-developer monorepo under a strict ownership model.

Developer Portfolio (Individual Project)

Live Demo: <https://andrii-mitko-brand.vercel.app/>

GitHub Code: <https://github.com/Andrii-Mitko/andrii-mitko-brand>

Technologies: Next.js, React, TypeScript, Framer Motion, CSS Modules.

Description: Personal developer portfolio and brand website showcasing projects, skills, and professional experience.

Functionality: Animated hero and project showcase (Framer Motion), responsive project cards with tech-stack tags, downloadable CV, and a contact section.

Role: Solo Developer. Designed and built the full site, including a reusable component and design system, from scratch.

STP-13021 (Commercial Team Project)

Live Demo: <https://anastacia-tkachova.github.io/STP-13021/>

GitHub Code: <https://github.com/Andrii-Mitko/STP-13021>

Technologies: HTML5, CSS3, JavaScript, Vite.

Description: Responsive commercial landing page built for a real client.

Functionality: Smooth animations, interactive UI sections (header, hero, about, gallery, FAQ), and optimized image/SVG assets.

Role: Frontend Developer. Collaborated with the team via a feature-branch/PR Git workflow to implement client-facing sections.

HTML & CSS Tutorial (Individual Project)

Live Demo: <https://textbook-html-css.vercel.app/>

GitHub Code: <https://github.com/Andrii-Mitko/textbook-html-css>

Technologies: Next.js, React, TypeScript, CSS Modules.

Description: Interactive HTML & CSS learning platform with structured lessons.

Functionality: Theory sections, practical exercises with hints and solutions, and SEO-optimized, responsive pages.

Role: Solo Developer. Built the platform structure and content delivery using Next.js and TypeScript.

Webcrafters Project 02 (Team Project)

Live Demo: <https://vitaliypolets.github.io/webcrafters-project-02/>

GitHub Code: <https://github.com/Andrii-Mitko/webcrafters-project-02>

Technologies: HTML5, CSS3, JavaScript, Git.

Description: A collaborative web platform focused on modern UI/UX principles.

Functionality: Interactive interface, responsive navigation, and optimized assets.

Role: Developer / Scrum Master. Collaborated in team development using Git workflow and implemented interactive frontend features.

System Eight Team Project (Team Project)

Live Demo: <https://noobstyleee.github.io/system-eight-team-project/>

GitHub Code: <https://github.com/Andrii-Mitko/system-eight-team-project>

Technologies: HTML5, CSS3.

Description: A corporate web resource focused on clean design and accessibility.

Functionality: Built-in responsive layout and reusable CSS patterns.

Role: Frontend Developer. Ensured cross-browser compatibility and performance optimization.

Watchcharm Project (Individual Project)

Live Demo: <https://andrii-mitko.github.io/Watchcharm-Projects/>

GitHub Code: <https://github.com/Andrii-Mitko/Watchcharm-Projects>

Technologies: HTML5, CSS3, JavaScript, Vite, Git.

Description: An e-commerce styled landing page for high-end watches.

Functionality: Multi-device compatibility, performance optimization, and modular CSS.

Role: Developer. Managed Agile workflow, optimized project structure.

WORK EXPERIENCE

Cancer Center

2022 – Present

Electrician – Medical Institution

- Responsibilities: Implementation of backup power systems and maintenance of critical electrical infrastructure.
- Achievements: Successfully integrated emergency generator systems ensuring 100% uptime for medical equipment.

KATRANBUD, LLC

2019 – 2022

Director

- Responsibilities: Managed team operations, project workflows, and strategic planning.
- Achievements: Developed an internal digital system for salary calculation and reporting, which improved operational efficiency by 20%.

EDUCATION

IT School GoIT — Full-Stack Developer — 2025 – 2026

Mariupol Mechanical and Metallurgical College, PSTU — Electrical Engineering – Power Systems and Automation — 1991 – 1995
